Checklist for Safe Vaccine Storage and Handling

Are you doing everything you should to safeguard your vaccine supply? Review this list to see where you might make improvements in your vaccine management practices. Check each listed item with either YES or NO.

Establish Storage and Handling Policies

YES NO	1.	We have designated a primary vaccine coordinator and at least one alternate coordinator to be in charge
		of vaccine storage and handling at our facility.

- 2. Both the primary and alternate vaccine coordinator(s) have completely reviewed either CDC's Vaccine Storage & Handling Toolkit (www.cdc.gov/vaccines/hcp/admin/storage/toolkit/storage-handling-toolkit. pdf) or equivalent training materials offered by our state or local health department's immunization program.
- 3. We have detailed, up-to-date, written standard operating procedures for general vaccine management, including procedures for routine activities and an emergency vaccine retrieval and storage plan for power outages and other problems. Our procedures are based on CDC's Vaccine Storage & Handling Toolkit and/or on instruction from our state or local health department's immunization program.
- YES NO 4. We review these policies with all staff annually and with new staff, including temporary staff, when they are hired.

Log In New Vaccine Shipments

- 5. We maintain a vaccine inventory log that we use to document the following:
- a. Vaccine name and number of doses received
- b. Date we received the vaccine
- ves No c. Condition of vaccine when we received it
- d. Vaccine manufacturer and lot number
- YES NO e. Vaccine expiration date

Use Proper Storage Equipment

- We store vaccines in separate, self-contained units that refrigerate or freeze only. If we must use a house-hold-style combination unit, we use it only for storage of our refrigerated vaccines, maintaining frozen vaccines in a separate stand-alone freezer.
- YES NO 7. We store vaccines in units with enough room to maintain the year's largest inventory without crowding.
- **NO** 8. We never store any vaccines in a dormitory-style unit (a small combination freezer-refrigerator unit with the freezer compartment inside the refrigerator).
- 9. We use only calibrated temperature monitoring devices (TMD) that have a Certificate of Calibration Testing* ("Report of Calibration") and are calibrated every 1 to 2 years from the last calibration testing date or according to the manufacturer's suggested timeline. If storing Vaccines For Children (VFC) vaccine, our TMD is a digital data logger (DDL).
- **YES** NO 10. We have planned back-up storage unit(s) in the event of a power failure or other unforeseen event.

* Certificate of Calibration Testing ("Report of Calibration") with calibration measurements traceable to a laboratory with accreditation from the International Laboratory Accreditation Cooperation (ILAC) Mutual Recognition Arrangement (MRA) signatory body.

Ensure Optimal Operation of Storage Units

- 11. We have a "Do Not Unplug" sign (e.g., www.immunize.org/catg.d/p2090.pdf) next to the electrical outlets for the refrigerator and freezer and a "Do Not Stop Power" warning label (e.g., www.immunize.org/catg.d/p2091.pdf) by the circuit breaker for the electrical outlets. Both signs include emergency contact information.
- VES NO 12. We perform regular maintenance on our vaccine storage units to assure optimal functioning. For example, we keep the units clean, dusting the coils and cleaning beneath the units as recommended by the manufacturer.

Maintain Correct Temperatures

- YES NO 13. We always keep at least one accurate (+/- 0.5°C [+/- 1°F]) calibrated temperature monitoring device (TMD) with the vaccines in the refrigerator and a separate calibrated TMD with the vaccines in the freezer.
 - 14. We use a temperature monitoring device (TMD) that
- YES NO a. uses an active display to provide continuous monitoring information.
- b. is digital and has a detachable probe that has been buffered against sudden temperature changes by being immersed in a vial filled with liquid (e.g., glycol, ethanol, glycerin), loose media (e.g., sand, glass beads), or a solid block of material (e.g., aluminum, Teflon®).
- ves No c. includes an alarm for out-of-range temperatures.
- **YES** NO d. has a low-battery indicator.
- **NO** e. has a digital data logger that indicates current, minimum, and maximum temperatures.
- f. can measure temperatures within +/- 0.5°C (+/- 1°F).
- g. has a logging interval (or reading rate) that can be programmed by the user to measure and record temperatures AT LEAST every 30 minutes.
- **YES** NO 15. We maintain the refrigerator temperature at 2–8°C (36–46°F), and we aim for 5°C (41°F).
- **YES** NO 16. We maintain the freezer temperature between -50°C and -15°C (-58°F and +5°F).
- YES NO 17. We set the thermostat for the refrigerator and the freezer at the factory-set or midpoint temperatures.
- NO 18. We keep extra containers of water in the refrigerator (e.g., in the door and/or on the floor of the unit where the vegetable bins were located) to help maintain cool temperatures. We keep ice packs, ice-filled containers, or frozen water bottles in the freezer to help maintain cold temperatures and to have frozen water bottles available for conditioning in the event of an emergency.

Maintain Daily Temperature Logs

- TES NO 19. If we are using a TMD (preferably a digital data logger or DDL) that records minimum and maximum temperatures, we check and record these temperatures first thing in the morning during each workday when our practice is open. (See selections for recording at www.immunize.org/clinic/storage-handling.asp.)
- ves NO 20. If we are using a TMD that does not record minimum and maximum temperatures, we check and record the current temperatures of the refrigerator and freezer at least twice each workday. (See selections for recording at www.immunize.org/clinic/storage-handling.asp.)
- **YES NO** 21. We consistently record temperatures on the log either in Celsius or Fahrenheit. We never mix temperature scales when we record our temperatures.
- **YES** NO 22. If the temperature log prompts us to insert an "x" by the temperature that's preprinted on the form, we do not attempt to write in the actual temperature.
- **YES** NO 23. We follow the directions on the temperature log to call appropriate personnel if the temperature in a storage unit goes out of range.

CONTINUED ON THE NEXT PAGE

(www.immunize.org/catg.d/p3041.pdf) to document actions taken when the problem was discovered and what was done to prevent a recurrence of the problem. NO 25. Trained staff (other than staff designated to record the temperatures) review the temperature logs weekly. NO 26. We keep the temperature logs on file for at least 3 years. YES **Store Vaccines Correctly** NO 27. We post signs (e.g., www.immunize.org/catg.d/p3048.pdf) on the doors of the refrigerator and freezer YES that indicate which vaccines should be stored in the refrigerator and which in the freezer. NO 28. We do not store any food or drink in any vaccine storage unit. YES YES NO 29. We store vaccines in the middle of the refrigerator or freezer (away from walls and vents), leaving room for air to circulate around the vaccine. We never store vaccine in the doors. NO 30. We have removed all vegetable and deli bins from the storage unit, and we do not store vaccines in these YES empty areas. NO 31. If we must use a combination refrigerator-freezer unit, we store vaccines only in the refrigerator section YES of the unit. We do not place vaccines in front of the cold-air outlet that leads from the freezer to the refrigerator (often near the top shelf). In general, we try to avoid storing vaccines on the top shelf, and we place water bottles in this location. NO 32. We check vaccine expiration dates and rotate our supply of each type of vaccine so that vaccines with the YES earliest expiration dates are located close to the front of the storage unit, facilitating easy access. NO 33. We store vaccines in their original packaging with the lids closed in clearly labeled containers. YES Take Emergency Action As Needed 34. In the event that vaccines are exposed to improper storage conditions, we take the following steps: a. We restore proper storage conditions as quickly as possible. If necessary, we label the vaccine "Do YES NO Not Use" and move it to a unit where it can be stored under proper conditions. We do not discard the vaccine before discussing the circumstances with our state / local health department and/or the appropriate vaccine manufacturers. b. We follow the Vaccine Storage Troubleshooting Record's (www.immunize.org/catg.d/p3041.pdf) YES NO instructions for taking appropriate action and documenting the event. This includes recording details such as the length of time the vaccine was out of appropriate storage temperatures and the current room temperature, as well as taking an inventory of affected vaccines. c. We contact our clinic supervisor or other appropriate clinic staff to report the incident. We contact our YES NO state/local health department and/or the appropriate vaccine manufacturers for consultation about whether the exposed vaccine can still be used. NO d. We address the storage unit's mechanical or electrical problems according to guidance from the YES unit's manufacturer or a qualified repair service. e. In responding to improper storage conditions, we do not make frequent or large changes in thermostat YES NO settings. After changing the setting, we give the unit at least a day to stabilize its temperature. f. We do not use exposed vaccines until our state/local health department's immunization program or the YES NO vaccine manufacturer has confirmed that the vaccine is acceptable for use. We review this information with our clinic medical director before returning the vaccine to our supply. If the vaccine is not acceptable for use, we follow our state/local health department instructions for vaccine disposition. If we answer **YES** to all of the above, we give ourselves a pat on the back! If not, we assign someone to implement needed changes!

YES NO 24. If out-of-range temperatures occur in the unit, we complete the Vaccine Storage Troubleshooting Record
