HEP C

→ Treat. Cure.

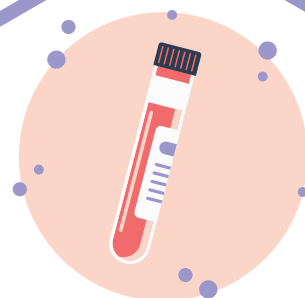

3 Simple Steps

Hepatitis C is a serious, curable liver disease spread by contact with infected blood.

Because it frequently presents with few or no symptoms, you could be infected for years without knowing it.

Untreated infection puts you at risk for life-threatening complications, including severe liver scarring (cirrhosis), liver cancer, or even death.

Take the first step today to know your status and start your path to be cured!

TEST

Know your status with one test.

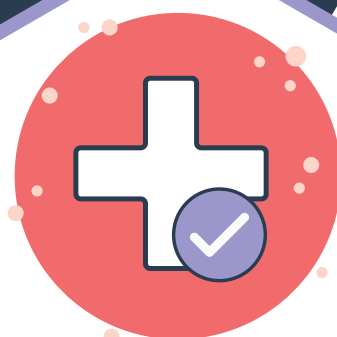

1

TREAT

Effective treatment can cure hepatitis C in 8-12 weeks.

2

CURE

Achieve a lasting, total cure for lifelong health and well-being.
