

HIV Among Persons Who Inject Drugs (PWID) in WV

2018 - 2022

Since 2018, persons reporting injection drug use (IDU) experience higher rates of newly diagnosed Human Immunodeficiency Virus (HIV) in West Virginia than other transmission risk categories.

65% of all newly diagnosed HIV cases in WV from 2018-2022 were PWID.

Sex At Birth:

Out of the 440 IDU cases, **263** are confirmed as male at birth and **177** are confirmed as female at birth.

Race/Ethnicity:

* Note: Data is low and considered unreliable, interpret with caution.

Newly Diagnosed HIV Infection Among PWID, 2015-2022

Stage Of Disease At Time Of HIV Diagnosis Among PWID, 2018-2022

* Note: Stage of disease at time of HIV diagnosis is based on the first CD4 test performed or documentation of an AIDS-defining condition ≤ 3 months (≤ 91 days) after a diagnosis of HIV infection.

Linkage To HIV *Medical Care After HIV Diagnosis Among PWID, 2018-2022

* Note: Linkage to HIV medical care was measured by documentation ≥1 CD4 or viral load or genotype test ≤30, ≤91, ≤182, and ≤365 days after HIV diagnosis.
